

The Moses®

The Moses® Elite

The Moses® oral appliances are the most effective oral airway dilators for use in the treatment of obstructive sleep apnea. By improving on previous mandibular advancement designs, *The Moses®* two part design has been shown to activate reflexes to advance the tongue, lower elevator muscle activity, reduce clenching, and decrease bruxism.

This unique design results in effective and comfortable mandibular advancement, guided tongue management, and proven patient compliance.

And for patients who have sleep bruxism, *The Moses® Elite* is the ideal appliance – the body is fabricated with Visiclear® which provides additional strength and flexibility.

The Moses®

The Moses® Elite

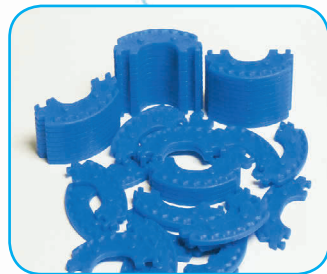

Designed to comfortably and effectively treat sleep apnea & snoring

Advantages of *The Moses®*

- Separate flexible retainer to prevent tooth movement
- Ideally designed to determine mandible protrusion, pre-set according to your bite registration
- Reduces clenching, decreases or prevents bruxism
- Buccal-mounted advancement screws allow for an open anterior space for the tongue
- The base of the device is specifically designed with acrylic guides that stimulate the tongue to a protrusive or anterior position
- Elevates tongue to the hard palate and increases nasal air flow
- Prevents collapse of the tongue on the pharynx
- Patients can easily talk, drink, open wide, and allows lip seal
- Comfortable, adjustable, and titratable

Side mounted elements allows conservative mandibular advancement

The Moses® bite shims facilitate lip seal and nasal breathing
